

flo™ 1750 electric latching cabinet

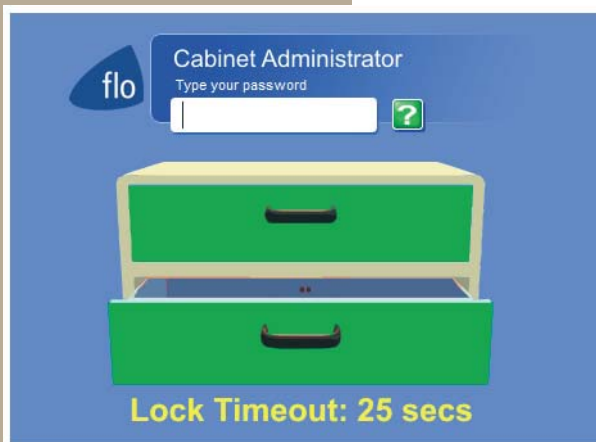

Keyless Storage with Auto-Relocking

The Flo Healthcare electric latching cabinet provides a keyless storage system that leverages the capabilities of your mobile workstation. This cabinet uses pin-codes to access your stored items via the computer. Because the electric latches use no power in the locked mode, the cabinet is extremely power efficient. Combined with Flo Dashboard, your entire fleet storage can be monitored through out your facility.

Configurable Security for the Point of Care

Easy to administer settings allow you to customize the cabinet to your security preferences--tailoring your protection levels to your storage needs. Special override codes bypass alarms and relocking mechanisms for both restocking and system administration.

flo™ ELC 100 Cabinet Specifications
