

ISG™ AutoCam Zoom Camera

Delivers high resolution image capture with full zoom control

Quality, speed and consistent cropping/centering are very important aspects of a photo ID system — and result in improved visual security. Captured images must be of good quality for the database and the printed card. Fast image capture from various distances, with the subject standing or sitting, is key. Images too distant, near or off-centered can compromise not only your photo ID card system but also your security program.

ISG™ AutoCam cameras are designed to provide the very best quality, consistency and speed. ISG exclusive cameras can be supported for the long term, unlike consumer cameras that require continual replacement. Ask your ISG dealer about your on-site support options.

ISG AutoCam Zoom Camera Features

- Full optical zoom control from mouse or keyboard
- Supports NIST and ICAO standards for law enforcement applications
- Powerful high intensity flash for perfect captures 18 inches to 14 feet from subject
- Flash directly integrated with camera – batteries not needed
- Auto-focus, 18 to 1 optical zoom (72 to 1 digital) under software control
- Custom cropping option allows image preview
- Complete integration with your ID software application
