# LabelClinic™ Print Server

## On-Demand Printing

## Lower Total Cost of Ownership

- ☑ Print to any available printer
- ☑ No forced printer models
- ☑ No forced media contracts from your software vendor
- ☑ No printer quantity limitations (unlimited printers per facility)
- ☑ Flat server based license per facility
- ☑ Unlimited stand-alone or downtime client usage
- ☑ Service Contract includes product updates and ICCBBA database updates

- LabelClinic supports eight primary and secondary ISBT-128 label formats, five Codabar formats and more...
- Full printing support for the 6,000 ICCBBA blood product codes
- Supports PDF output of label format for documentation
- Output to over 1,300 thermal printer drivers optimally designed for label output or to any office printer

## Flexible Use

- LabelClinic can be integrated as a transparent print process into most blood management or laboratory information systems (LIS).
- Downtime client can be used as a stand-alone print client if no integration to the LIS is available

## Secure

- Configurable authentication for administrator and client modules
- Configurable inactivity timeout on stand-alone/downtime client to prevent unauthorized label printing
- Encrypted database ensures database integrity

## Current and Reliable

- LabelClinic product code database updates as ICCBBA product codes are updated without reinstalling the software
- Print Server process designed for high availability
