Healthcare
Patient Safety through Positive Identification.

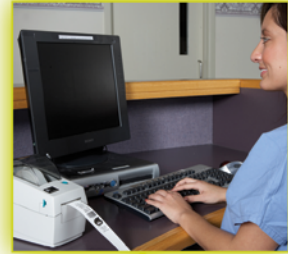

Patient Safety through Positive Identification

Patient Safety Solutions through Positive Identification

NiceWare Healthcare solutions use bar code and RFID software technology to help patient care providers streamline, automate and improve accuracy within the healthcare industry.

Interfaced Patient Identification

NiceWatch Enterprise Business Connector captures structured text from any Healthcare Information System (HIS) or Laboratory Information System (LIS) to generate a bar code and RFID smart label print job for printing patient wristbands, chart labels or admitting forms. The NiceWatch Enterprise Business Connector can operate from a Health Level 7 (HL7) compliant output to extract data and set target label templates and printers to execute the print functions in seconds. Integrating bar code and RFID printing has never been easier.

Downtime Patient Identification

The **NiceForm** module creates a customized application with personalized data entry screens. Regardless of a scheduled or unscheduled downtime, NiceForm is a perfect tool for offline or downtime stand-alone applications to generate patient wristbands, chart labels or admitting forms. NiceForm is a customized interface that captures all entered data and archives it to a database or file that can be reconciled with the parent database at a later time.

Blood and Cellular Therapy Identification

LabelClinic® ISBT and **LabelClinic® CT** provide a secure, robust and flexible ISBT-128, Codabar and Cellular Therapy compliant label printing environment that is operated as a stand-alone system or interfaced to an information system. The LabelClinic products eliminate the learning curve and time to deploy blood and cellular therapy labeling in your blood bank.

Laboratory Specimen Identification

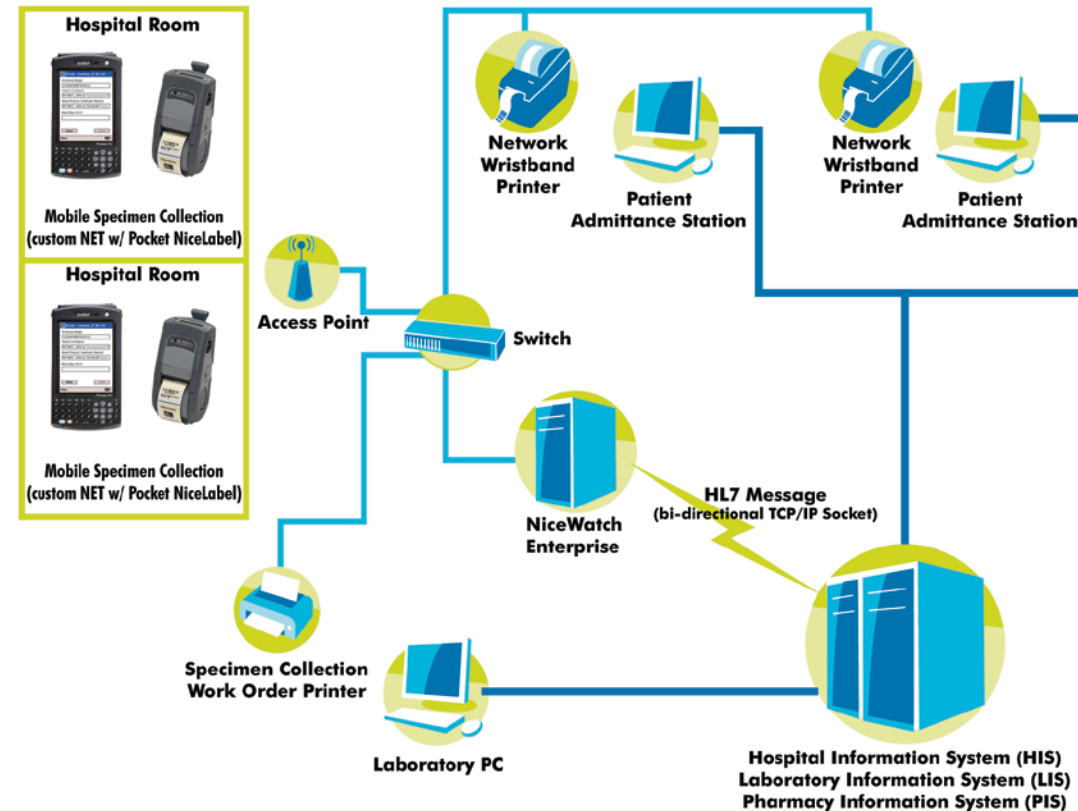

The **NiceForm** module provides very specific identification application options in laboratory environments. For example, NiceForm drives histology cassettes and slide printing systems to uniquely identify specimen in laboratories. **NiceWatch** adds a separate integration layer connecting NiceLabel applications to your Laboratory Information System (LIS). While NiceForm is used for very specific identification applications, NiceWatch adds a bar code to any specimen requisition form when the LIS is incapable to output the required bar code.

Histology Workflow Tracking

LabelClinic® HTS is a scalable bar code tracking system for Histology workflow in the Anatomic Pathology lab. **LabelClinic® HTS** enables the lab to configure the system to accommodate their workflow, without compromising patient safety or confidentiality. Cassette and slide verification, validation and tracking are made simple while providing detailed productivity reporting.

NiceWatch Enterprise Business Connector - HL7 Messaging

The NiceWatch Enterprise Business Connector edition provides HL7 compliant global messaging integration for healthcare providers and all healthcare identification solutions.

NiceWatch Enterprise Business Connector is a centralized label printing middleware that integrates printing of wristband, charts and admittance forms into Healthcare Information System (HIS), Laboratory Information System (LIS), Pharmacy Information System (PIS) applications and others.

The Enterprise Print Manager module enables remote administration of triggering, printing, logging, event messaging and alerting through a web-based interface.

NiceWatch Enterprise Business Connector edition is a very reasonably priced HL7 messaging server that works well inside or outside of patient identification applications.

NiceWare Healthcare software solutions provide a critical component of our patient identification and bedside labeling applications. Our solutions are unique because they simplify specimen identification and reduce the instances of misidentified specimens cost-effectively, without significant IT resources or long implementation schedules. NiceWare Healthcare solutions helped us develop patient safety solutions so our customers are compliant with JCAHO requirements for identifying patients and labeling specimens at the bedside to improve care.

Roz Ben-Chitrit
VP Business Development, Patient Safety
The St. John Companies

Niceware Healthcare solutions use bar code and RFID software technology to help patient care providers improve patient safety.

Niceware Healthcare – Patient Safety through Positive Identification.

- Enhance patient safety
- Ensure positive patient identification
- Reduce specimen and medication labeling errors
- Foster patient and caregiver confidence
- Communicate with all IT systems
- Comply with HL7 global messaging standards
- Implement low cost solutions

For in-depth information on the Niceware Healthcare solutions see additional solution pages at <http://healthcare.nicewareintl.com>

- Pharmacy Identification

Niceware Professional Services

Consulting Services

Niceware Healthcare offers consulting services to help you find the best patient safety solution. Consulting services include:

- Planning, consulting and implementation
- Site surveys
- On-site software installation, configuration and testing
- Technical Support
- Hardware Vendor Selection

Professional Services

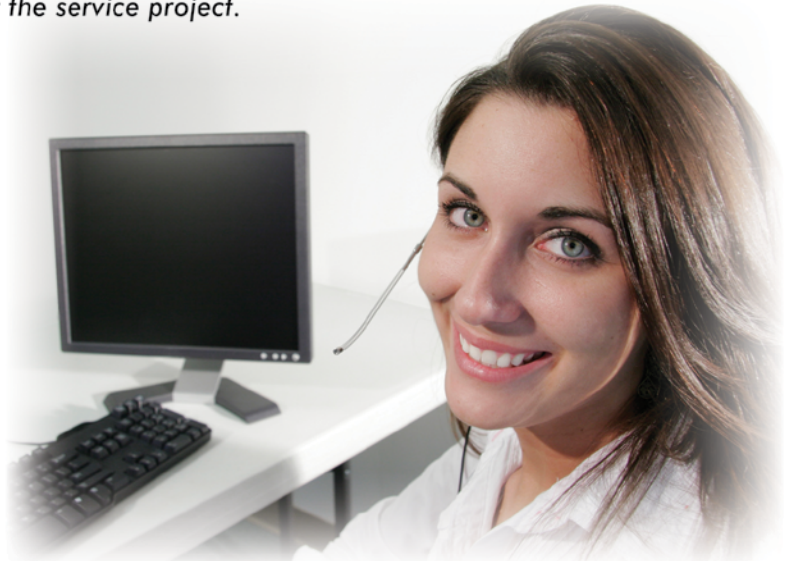

Although Niceware Healthcare solutions are designed with ease-of-use in mind, certain labeling projects and solution implementations require the expertise of trained technicians. Niceware Healthcare offers the following professional services:

Label template design: Niceware Healthcare uses NiceLabel Pro for label template design to meet your unique wristband, chart and admittance form specification needs.

Label form design: Niceware Healthcare uses NiceForm to create applications with a simple and customized user interface that enable care givers to focus only on data entry and positive identification.

Integrating labeling applications and HL7 messaging: Niceware Healthcare implements the NiceWatch Enterprise Business Connector solution to simplify wristband, chart and admittance form printing as well as to enable healthcare institutions, insurances and suppliers to communicate with each other.

All services are quoted on a fee basis depending on the complexity and scope of the service project.
